The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, especially or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody wariable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              42 GlyLys----GlyLeu----GluTrpl1EGlyGluIleAsnHisSerGlySerThrAsnT 59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nybrid antibody; framework region; homology; immunogenicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      93

Anti-Id1 Ab binding-defective mutant Ramos cell VH K70N/S77N

18-SEP-2000 (first entry)

AAB01949;

```
The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (1) providing an initial antibody having specificity for a target; (ii) determining the sequence of a variable region of the initial antibody; (iii) selecting a first component of the variable region consisting of FR1, FR2, FR3 and FR4; (iv) comparing the sequence of the first component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from a trarget species; (v) selecting a sequence from an antibody in the database which demonstrates a high degree of homology to the first component; (vi) selecting a second component of the variable region which is alfferent than the first component to sequence of the second component to sequence so natibody fragment sequence database of antibody sequences or antibody fragment sequence attabase of antibody sequences or antibody fragment sequence attabase of antibody sequences from the database which demonstrates a high selecting a sequence from the database which demonstrates a high selected framework sequences from the database which demonstrates a high selected framework sequences to one or more complementarity determining antibody that the selected antibody; and (ix) operatively linking the selected framements are useful for therappeutic and diagnostic purposes. The method uses entire framework regions from a single antibody variable heavy or variable light chain to receive the CDRs. This produces antibods that highly homologous and exhibit reduced immunogenicity while maintain the selective the CDRs. This produces antibods that high and a single maintain to receive the CDRs. This produces antibods and a single maintain to receive the CDRs. This produces antibods and a single maintain to receive the CDRs. This produces antibods and a single maintain the maintain and exhibit red
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       maintaining an optimum binding profile. This sequence represents the amino acid sequence of an antibody from the VH gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             97

```
The invention relates to a method of preparing a lymphoid cell line capable of directed constitutive hypermutation of a target capable of directed constitutive hypermutation of a target nucleic acid mutation sace screening a cell jopulation for ongoing target sequence diversification and selecting a cell in which the cate of target nucleic acid mutation exceeds that of other nucleic acid mutation exceeds that of other nucleic acid mutation expressing a cell in which the capacing a gene product with a desired activity, comprising expressing a nucleic acid encoding the target gene operably linked to a sequence which directs hypermutation e.g., terminal deoxynucleotidyl expressing a mutated gene product with the desired activity. One cells with an improved activity of interest are selected. These steps may be iteratively repeated until a gene product with a desired of activity of sobtained. The cell lines prepared according to the method of the invention are used for directed constitutive hypermutation of a nucleic acid region in the preparation of a gene product, preferably an enzyme or an immunoglobulin (Ig) with a desired activity. In the exemplifications of the invention, IgM-secreting Ramos cells were selected for use as they undergo hypermutation during clonal expansion. This was determined on the basis of the amount of diversity in the heavy chain variable region (VH). Sequences AAB01949-B01954 which have lost the ability to bind anti-idotype antipodies (anti-ida Ab) relative to the will-type VH (AAB01948). Note: The present sequence is not shown in the specification, but is derived from the wild-type Ramos cell VH shown in figure 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lymphoid cell line preparation useful for producing gene products having desired activity, involves screening and selecting cells having ongoing target sequence diversification and higher mutation rates.
                                                                                                                                                                                                                                                                                                            /note= "Encoded by CAG"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sale JE, Neuberger MS, Cumbers SJ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

Patent No. 6787638
GENERAL INFORMATION:
APPLICANT: Huse, William D.
TITLE OF INVENTION: Tumor Specific Human Monoclonal Antibodies and Methods
TITLE OF INVENTION: Of Use
TITLE OF INVENTION: Of Use
TITLE OF INVENTION: 1998-12-02
CURRENT APPLICATION NUMBER: US/09/203,768A
CURRENT FILING DATE: 1998-12-02
NUMBER OF SEQ ID NOS: 8
SOFWARE: PatentIn Ver. 2.0
SEQ ID NO 2
LENGTH: 139

This invention describes a novel cell-targeting vector (A) containing a CC DNA sequence (I) encoding a single-chain variable antibody fragment (SDNA sequence (I) encoding a single-chain variable antibody fragment (SDNA). The products of the invention have antiviral, cytostatic and immunostimulant activity and can be used in gene therapy, immunization and diagnosis particularly of T cell-associated diseases, specifically acquired immune deficiency syndrome (AIDS), severe combined immune to deficiency (SID) or T cell lymphoma. (A) target T cells, independently of the CD4 receptor, with high selectivity, 4-5 fold selectivity over three CC designated 7A5 encodes a 329 amino acid single-chain variable antibody fragment, fully defined in the specification. It was used to transform CD7 (canine osteosarcoma cells susceptible to spleen necrosis virus (SNV) cells, CB166 (human T lymphocyte) cells, and HeLa (human cervical carcinoma) cells. After 48 hours, the cells were stained with X-gal to determine transformation. The viral liter (infectious units/ml) was over 1 million for D17, 1 million for CB166 but less than 100 for HeLa, showing the high selectivity for human T cells. This sequence represents the SNV-env leader/human 6C3-scPv fusion construct used in the invention. CU (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                             Cell-targeting vector selective for T lymphocytes, useful in gene therapy of e.g. acquired immune deficiency syndrome, encodes a single-chain variable antibody fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      117 IleSerAlaAspLysSerIleSerThrAlaTyrLeuGlnTrpSerSerLeuLysAlaSer 136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                137 AspThrAlaMetTyrTyrCysAlaArgValSerGlyTyrCysSerSerThrSerCysTyr 156

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                          The present sequence is the anti-murine CTLA-4 sFV (M24 sFV). This is a membrane-associated protein which binds to CTLA-4. Chimeric constructs comprising DNA sequences encoding the extracellular domain of murine CTLA4 and human CDB were used for the study of anti-CTLA4-sFV protein. The anti-hCTLA4 sFV functions as a ligand binding to CTLA-4 on activated T-cells and antagonises the co-stimulatory signal provided by the interaction between donor B7 and recipient CD28. Cells expressing the anti-hCTLA4 sFV failed to stimulate T-cell proliferation. This is used in xenograft-specific immunosuppression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human monoclonal antibodies or their antigen binding portions that specifically bind to dendritic cells and has one or more of the following characteristics: (a) a binding affinity constent to a dendritic cell of at least about 10 to the power 7 M-1; (b) the ability to opsonise a dendritic cell; (c) the ability to internalise after binding to dendritic cells; or (d) the ability to activate dendritic cells. The isolated human monoclonal antibody or its antigen binding portion may also have any of the following characteristics: (a) mediates cytolysis of dendritic cells in the presence of human effector cells; or (b) inhibits growth of dendritic cells. The antibodies or its antigen binding portion, binds to and blocks the human mannose receptor on dendritic cells. The antibodies have immunomodulatory, antiinflammatory, antirheumatic, antiarthritic, neuroprotective, antidiabetic, antianaemic,

endocrine, dermatological, antithyroid, uropathic, ophthalmological and muscular activity. The antibodies or their antigen-binding fragments are useful for inhibiting growth of a dendritic cell, inducing cytolysis of a dendritic cell, inducing cytolysis of detecting the presence of a dendritic cell mediated disease, detecting the presence of a dendritic cell, targeting an antigen to a bacterium) to human mannose receptor on dendritic cells. In particular, the antibodies may be used to treat, autoimmune disease, graft versus host disease, immune system or inflammatory disorders (e.g. rheumatoid perthritible sclerosis, diabetes mellitus, mysathenia gravis, pernicious anaemia, Addison's disease, lupus erythematosus, Reiter's syndrome and Graves disease. The present sequence is that of the human monoclonal antibody B11 variable heavy chain, useful to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        molecular conjugate; monoclonal antibody; human antigen presenting cell; antigen presenting cell; APC; human; beta human chorionic gonadotropin; betahCG; beta chorionic gonadotropin; antibody; cell-mediated immune response; immunisation; cytostatic; antimicrobial; immunosuppressive; anti-HIV; hepatotropic; virucide; antimalarial; loss agonist; vaccine; autoimmune disorder; cancer; infectious disease; melanoma; fibrosarcoma; leukaemia; HIV; hepatitis; malaria; herpes; antibody B11; heavy chain variable region.

New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing ecytotoxic T cell response in cancers and infectious diseases.

SEQ ID NO 4; 82pp; English

The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (APCs) introduced beta human choronic gonadorropin (betafico), where the antibody comprises a heavy and/or light chain variable region derived from a human choronic gonadorropin, the sequence with the 98 or 95 amino acid sequences of SEQ ID NO:30 or 32 (ADR46847), or ADR46849), respectively. Also described: (1) a molecular conjugate comprising a human antibody heavy chain and a human antibody light chain, where either or both chains are inned to betahog; (2) a molecular conjugate comprising a human shingle chain antibody that binds to human APCs linked to betahog; where the conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates as described above, and a carrier, optionally in combination with an activation antipent of the molecular conjugates of escribed above with APCs such that the antigen is processed and presented to T cells in a manner which induces or enhances a T cellmediated response against the antigen, (5) immunising a subject comprising doministering any of the molecular conjugates described above, which APCs such that the antigen, a cytokine which stimulatory agent; and priferation of endoritic cells and/or an immunostimulatory agent; and conjugate of the antigen and a monoclonal antibody which binde to APCs, and contacting the conjugate either in vivo or exvivo with APCs such that the antigen is internal sed, processed and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against the antigen. The molecular conjugate become against the antigen is internal sed, processed and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against the antigen. The molecular conjugate of the present eliciting a potent antigen specific cytotoxic T lymphocyte response, including melanoma, fibrosarcoma, leukaemia, HIV, hepatitis, malaria and herpes. The present sequence represents a human antibody B11 heavy chain variable region, which is used in the exemplification of the present

New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing a cytotoxic T cell response in cancers and infectious diseases.

Claim 16; SEQ ID NO 12; 82pp; English

The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (APCS) linked to beta human chorionic gonadotropin (DetahCG), where the antibody comprises a heavy and/or light chain variable region derived from a human chorionic gonadotropin (DetahCG), where the antibody comprises a heavy and/or light chain variable region derived from a human composition of the man antibody heavy cast langate comprising a human antibody heavy chain antibody that binds to human APCs linked to betahCG, where the chain antibody that binds to human APCs linked to betahCG, where the conjugate comprising the single chain antibody that binds to human APCs linked to betahCG, where the conjugate comprising on composition comprising any of the molecular conjugates as described above, and a carrier, optionally in combination with an adjuvant; (4) inducing or enhancing a T cell-mediated immune response, against betahCG, comprising contacting any of the molecular conjugates described above with APCs such that the antigen is processed and presented to T cells in a manner which induces or enhances a T cell-comprising administering any of the molecular conjugates described above, with the antigen is simmunishing selecting and confidence of the molecular conjugates described above, with the antigen and a monoclonal antibody of the molecular conjugates grainst the antigen is internalised, processed and comprising or APCs, and contacting the conjugate either in vivo or exvivo with APCs such that the antigen and a monoclonal antibody with APCs such that the antigen is internalised, processed and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against the antigen. The molecular conjugate either in vivo or exvivo with APCs such that the antigen is internalised, processed and comprising a manner which induces or enhances a cytotoxic T cell response against the antigen. The moleculas conjugate either in vivo or exvivo with APCs such that the ant are useful for inducing a cytotoxic T cell response, and in particular for treating autoimmune disorders, cancers and infectious diseases by eliciting a potent antigen-specific cytotoxic T lymphocyte response, including melanoma, fibrosarcoma, leukaemia, HIV, hepatitis, malaria and CC VHS-51 or VK-L15 germline sequence with the 98 or 95 amino acid sequences of SEQ ID NO:30 or 32 (ADR46847, or ADR46649), respectively. Also described: (1) a molecular conjugate comprising a human antibody heavy chain and a human antibody light chain, where either or both chains are linked to betahCG; (2) a molecular conjugate comprising a human single chain antibody that binds to human APCS linked to betahCG, where the CC (ADR46829); (3) a composition comprising any of the molecular conjugates as described above, and a carrier, optionally in combination with an adjust betahCG, comprising or enhancing a T cell-mediated immune response, against betahCG, comprising or enhancing any of the molecular conjugates corprised above with APCs such that the antigen is processed and presented to T cells in a manner which induces or enhances a T cell-mediated response against the antigen; in mediated response against the antigen; in modernally in combination with an adjuvant, a cytokine which stimulates conjugates described above, comprising deministering any of the molecular conjugates described above, comprising forming a conjugate of the antigen and a monoclonal antibody which binds to APCs, and contacting the conjugate either in vivo or ex vivo with APCs such that the antigen and a monoclonal antibody which binds to APCs, and contacting the conjugate either in vivo or ex vivo with APCs such that the antigen is internalised, processed and compositions of the methods and can be used as a CDB agonist, contactic, antimicrobial, immunospitions of the present invention are vivous and in vaccines. The methods and compositions of the present invention. eliciting a potent antigen-specific cytotoxic T lymphocyte response, including melanoma, fibrosarcoma, leukaemia, HIV, hepatitis, malaria and herpes. The present sequence represents a human antibody B11 heavy chain variable region, which is used in the exemplification of the present are useful for inducing a cytotoxic T cell response, and in particular for treating autoimmune disorders, cancers and infectious diseases by invention.

```
The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (RPCS) intended to beta human chorionic gonadotropin (betahCG), where the antibody comprises a heavy and/or light chain variable region derived from a human comprises a heavy and/or light chain, variable region derived from a human comprises of SEQ IO NV:15 germinal sequence with the 98 or 95 amino acid sequences of SEQ ID NO:30 or 32 (ADR46447) or ADR46849), respectively. Also described: (1) a molecular conjugate comprising a human antibody heavy chain antibody that binds to human APCS linked to betahCG, where the conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates of secribed above, and a carrier, optionally in combination with an adjuvant; (4) inducing or enhancing a T cell-mediated immune response, gaints the antigen; is jumunishing a subject comprising administering any of the molecular conjugates described above with APCs such that the antigen is processed and presented to realization of dendritic cells and/or an immunostimulatory agent; and composition of the antigen and a monoclonal antibody which binds to APCs, and conjugate of the antigen and a monoclonal antibody which binds to APCs, and confucting the antigen is internalised, processed and (5) inducing to APCs, and confucting the conjugate either in vivo or exvivo with APCs such that the antigen is internalised, processed and compositions of the present invention article and antimalarial activities, and can be used as a cytocoxic or presented to reclise in a manner which induces or enhances a cytocoxic or corpusing action antigen action with APCs such that the antigen is internalised, pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing ecytotoxic T cell response in cancers and infectious diseases.

The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzheimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
                                                                                                                                                            89 IleSerAlaAspLysSerIleSerThrAlaTyrLeuGlnTrpSerSerLeuLysAlaSer 108

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Weber R;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D), useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer.

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 306641880.0,99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGCGAGT 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modularing collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the cilone 30664188. Os arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGCGAGT

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody; binding fragment; platelet derived growth factor-DD; PDGF-DD; nephritis; mesangial cell proliferation inhibition; mesangial proliferative glomerulonephritis; nephrotropic; antiinflammatory; dermatological; immunosuppressive; antiidiabetic; gene therapy; human; monoclonal antibody; mAb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGCGAGT

The present invention describes an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described: (1) a method of detecting nephritis; (2) a method of thibiting mesangial cell proliferation; and (4) a method of training mesangial cell proliferation; and (4) a method of traininflammatory, dermatological, immunosuppressive and antidiabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesangial proliferative glomerulonephritis. The present sequence represents a human monoclonal antibody (mab) variable region sequence represents a human exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            an antibody or its binding fragment that binds platelet derived factor-DD (PDGF-DD) for preparing a medicament for treating
                                                                                                                                                                                                                                                                     Larochelle WJ, Lichenstein H;

```
The present invention describes a human monoclonal antibody (1) that specifically binds to tumour necrosis factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22411); and (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (S1, ADP22418) or (S4, ADP22424). Also described: (1) assaying (M1) the level of TNRa in a patient sample, comprising concacting with (T), and detecting the level of binding between the antibody and TNRa in fragment and a carrier; (3) treating (M2) an animal suffering from a neoplastic, or an immuno-mediated inflammatory disease by selecting an animal in need of treatment for the disease by administering the human monoclonal antibody of (T); and (4) inhibiting (M3) TNRa induced apoptosis by administering the human monoclonal antibody of (T); and (4) inhibiting (M3) TNRa induced apoptosis by administering the human monoclonal antibody of (T); and (4) inhibiting (M3) TNRa induced apoptosis by administering the human monoclonal antibody of (T); and (A1) inhibiting (M3) TNRa induced apoptosis by administering the human monoclonal antibody of (T); and (T) inhibiting (M3) TNRa induced apoptosis antihinflammatory, antipocratic, antitheumatory, antipocratic, antitheumatory, antipocratic, antitheumatory, antipocratic, antitheumatory, antipocratic, antitheumatory, antipocratic, cancer, ovarian cancer, bidder cancer, colon cancer, ovarian cancer, bladder cancer, colon cancer, and prostrate cancer, kidney cancer, colon cancer, ovarian cancer, bladder cancer, colon cancer, ovarian cancer, bladder cancer, colon cancer, and prostrate cancer, solon cancer, colon cancer, and prostrate cancer, solon cancer, colon cancer, ovarian cancer, bladder cancer, colon cancer, and prostrate cancer, solon cancer, and prostrate cancer, solon ca
induced apoptosis; neoplastic disease; breast cancer; ovarian cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzheimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
